Practical advise

■ Carpets

These basic precautions will allow you to keep your carpets much longer.

- **Sun and moon** rays can cause color fadings often hidden by dirt present on your carpet. If possible, move your carpet during the year. This action will limit sun and moon exposure.
- **Stains must be treated as soon as possible.** Do not wait because when time goes by, an oxydation phenomenon occurs and stains are fixing more and more into the fibres.
- **Be careful! If you remove the stain by yourself,** you could fix the stain in an irreparable way, damage permanently the fibres, and cause « colorings smears » or create rings.
- If you give us your carpets as soon as they are stained, we will have better chance to obtain a satisfying result. We use **specific stain removers** which give us excellent results provided that the stain has not been touched.

Cleaning advise

■ Carpets

The cleaning of your carpets requires time and delicacy. Of course you can take care of it by yourself, but there is nothing better than the work done by a professional used to the techniques of textile care.

- Of course it is highly recommended to **dust regularly your carpets** with your vacuum cleaner. It is important to know that dust gathered around the knots damages your carpet and speeds up its wear.
- Do not hesitate to add a fragrant note ! You will easily find « **vacuum air fresheners** » which allow to perfume your carpets and your rooms.
- However, cleaning by a specialist turns out to be **the only** complete treatment which ensures **perfect cleanliness and hygiene**.
- After a thorough cleaning in accordance with the texture of your carpet, we will finish the cleaning with a stain removal appropriate to each kind of stains. Your carpets will get different complementary treatments :
 - Clothes moth repellent treatment.
 - Dust-mite repellent treatment.
 - Anti-stains treatment, particularly efficient against deep stain residues.
