

MOTHS

■ An invisible scourge for all your woolen garments and articles

Clothes moths are small butterflies that lay their invisible larvae on your clothes. The latter may remain a long time in your cupboard because they have enough dampness to live there.

In the meantime, they eat wool and other natural fibers present in your clothes : coats, suits, pullovers, skirts, but also blankets, carpets...

Presence of moths = no doubt there will be holes!

■ How to protect your clothes?

A regular care of your clothes is highly recommended. It is necessary to put clean clothes into your cupboard, especially during seasons changes in order to avoid proliferation.

The doors of your chest of drawers and of your cupboards must be perfectly closed in order to avoid moths intrusions.

It is also recommended to cover the clothes you rarely wear.

■ How to protect your upholsteries?

Make sure to clean your curtains and blankets regularly and Hoover your carpets. However, the cleaning of these articles by a specialist turns out to be the only full treatment that guarantees perfect cleanliness and hygiene.

If you want to keep your curtains and blankets into covers, it is also necessary to make them clean before putting them into your cupboard in order to avoid moths proliferation when stocking them.

MOTHS

■ Say no to moths!

Although regular care is necessary to neutralize moths larvae, it has been proven that a moth repellent protection for each article is the only optimum guarantee.

Treatment for each article = guaranteed protection !

There are of course extra treatment to insert into your cupboards (mothballs, cedar balls...). However, these treatments are short lived treatments and it is advised to change them every 2 or 3 months. Moreover these products cannot treat the concerned article directly.

■ The 5àSec innovation : MICROSTOP® moths repellent

5àSec innovates and offers you moth repellent treatment for each articles.

This is the only guarantee for optimum protection .

MICROSTOP® moth repellent is indeed a treatment based on natural plant essences. It is safe for your health.

■ 5àSec recommendations

To avoid your clothes being infested and damaged, ask your 5àSec shop a protecting MICROSTOP® moth repellent treatment for your pullovers, cardigans, suits, dresses...each time you make them clean.

To avoid your upholsteries being infested and damaged, it is important to renew the MICROSTOP® moth repellent protection care at least twice a year.
